

WISDOM WOKE

wisdomwokedev@gmail.com | [Portfolio](#) | [Github](#) | [linkedIn](#)

SKILLS

- **Frontend Development:** React, React Native, Next.js, Vue.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, Material-UI, Styled-Components, SCSS, Shadcn.
- **Backend Development:** Node.js, Express.js, Fastify, Python, JavaScript, TypeScript, REST, WebSocket, OAuth, JWT, Firebase Auth, Convex.
- **Databases:** PostgreSQL, MySQL, MongoDB, AWS DynamoDB, Redis, Prisma, Sequelize, Mongoose.
- **AI & ML:** Yolo models, OSNET, python, TensorFlow, PyTorch, Google Colab
- **DevOps & Cloud:** AWS (EC2, S3, Lambda, RDS, CodePipeline), Google Cloud Platform, GitHub Actions, AWS CloudFormation, Nginx, Vercel, Render, Netlify, AWS.
- **Development Tools:** Visual Studio Code, WebStorm, Git, GitHub, GitLab, Postman, Thunder Client, Hopscotch, Webpack, Vite, ESLint, Prettier.
- **Additional Skills:** Technical Content Writing (OpenReply Author), Agile Methodologies (Scrum, Kanban), Linux, Fluent in English, Web Application Development, Object-Oriented Programming

Professional Experience

Eglobal-Sphere

Full Developer and AI

Jan 2025 – Present

- Led frontend development for the flagship SphereX application, building responsive and intuitive user interfaces using React and TypeScript, ensuring seamless integration with backend APIs to deliver a cohesive user experience across web and mobile platforms.
- Spearheaded the launch of multiple client-facing projects, developing tailored frontend solutions with Next.js and Tailwind CSS to enhance client accessibility and engagement, streamlining user interfaces for efficient onboarding and improved satisfaction
- Designed and implemented the frontend of a performance management system, integrating cutting-edge technologies like FaceID for secure user authentication, using React Native and TypeScript to create a responsive and user-friendly interface.
- Developed mobile app frontend features, incorporating Apple Wallet and Google Wallet integrations to enable seamless digital transactions, ensuring cross-platform compatibility and an enhanced user experience on iOS and Android.
- Optimized frontend performance by implementing lazy loading, code splitting, and efficient API consumption, ensuring robust and scalable client-side applications for enterprise clients.

- Designed and implemented a multi-tier architecture: desktop (Tauri + Rust + Python AI), cloud API, admin portal, and web client
- Built an offline-first desktop app with local SQLite, embedded API, and optional cloud sync
- Integrated computer vision pipeline: InsightFace face matching, YOLO detection, ByteTrack tracking, ONNX Runtime
- Implemented real-time camera monitoring: RTSP capture, FFmpeg transcoding to HLS, AI overlays in the UI
- Developed multi-tenant backend: auth, licensing, employees/zones/shifts, access logs, audit trail, scheduled jobs
- Set up CI/CD for cloud client (GitHub Actions, pnpm, deploy via SSH)
- Wrote automated tests (backend pytest, cloud Vitest, Playwright smoke runner)

Rivva

Backend - QA tester contract

July 2025 – Aug 2025

- Designed and executed backend test suites for Convex and Node.js services, ensuring stability, performance, and data consistency across distributed systems.
- Utilized Fast-check for property-based testing, uncovering hidden edge cases and strengthening overall test coverage.
- Implemented backend unit, integration, and system tests with Convex-test and Vitest, validating API logic, database queries, and real-time event handling.
- Performed pairwise testing to systematically minimize redundant combinations while ensuring comprehensive scenario coverage.
- Applied exploratory (exhaustive) testing to uncover unexpected behaviors and edge cases that scripted tests might miss.
- Leveraged Jest and Mocha/Chai for legacy Node.js testing, reducing regression risks and ensuring backward compatibility.
- Executed API contract testing with Postman/Bruno, verifying REST and GraphQL endpoints.
- Partnered with developers to reproduce defects, debug issues, and deliver clear, actionable bug reports.
- Enhanced testing strategy by incorporating performance checks, monitoring, and continuous feedback loops.

Fowgate Ilc

Full Stack Developer

Nov 2023 – Dec 2024

- Enhanced a School Management System (SMS) using the MERN stack (MongoDB, Express.js, React, Node.js), achieving a 20% improvement in page load times and user engagement metrics, implementing new features including school fees payment processing, graduation tracking, class promotions, and student repetitions, increasing operational efficiency by 25%.
- Developed a real estate web application as a full-stack developer, utilizing React.js for dynamic frontend interfaces, Node.js and Express.js for robust backend APIs, and SQL (PostgreSQL) for efficient data management, delivering a scalable platform for property and user metrics.

- Transformed Figma designs into reusable React components for both SMS and real estate projects, streamlining frontend development and ensuring consistent UI/UX across applications.
- Implemented server-side APIs using GraphQL and integrated them with PostgreSQL for the SMS, achieving a 15% improvement in query performance and enhancing data retrieval for enterprise-level operations.

Rekrd

Frontend Developer

Nov 2024 – Dec 2024

- Translated UI/UX wireframes into high-quality code using Next.js and TypeScript, ensuring cross-browser compatibility.
- Optimized frontend performance with lazy loading and code splitting

OpenReplay

Contract Technical Writer

Nov 2022 – Apr 2023

- Wrote technical content on frontend, testing, and general development-related technologies.

Projects

[Flow | Online Learning Platform](#)

- TypeScript, Node.js, Express 5, REST API (/v1 modular routes), Zod validation, JWT + express-session (Mongo-backed), bcrypt, Helmet, CORS, Winston
- MongoDB, Mongoose, Redis (Upstash / ioredis), BullMQ queues & in-process workers, node-cron
- Mastra AI framework – multi-agent orchestration, workflows, LibSQL memory & vector store, RAG (@mastra/rag), Mastra evals
- LLMs via Vercel AI SDK – Google Gemini, Groq, OpenAI, OpenRouter; Tavily web search; You.com SDK; Google Cloud Translate
- 80+ domain-specific AI agents & pipelines (standard/flexible courses, chapters, lessons, images, quizzes, flashcards, checkpoints, tips, chatbot, notes)
- Socket.io realtime (Redis adapter/streams) for live course-generation and collaboration
- Cloudinary media uploads; Polar.sh subscriptions, checkout & webhooks; Nodemailer + Pug emails; web-push (VAPID)
- Kokoro TTS – Python FastAPI microservice (PyTorch, SQLAlchemy/SQLite, Docker, API-key auth, rate limiting)
- Next.js 15/16, React 19, App Router, Tailwind CSS 4, Radix UI / shadcn, TipTap, Framer Motion, SWR, Zustand, Axios, Socket.io client, Google OAuth

- React Native, Expo 54, Expo Router, Reanimated, React Navigation, Secure Store
- Polyglot monorepo: consumer web, admin dashboard, mobile app, backend API, TTS service
- Layered backend – modules (auth, courses, lessons, quizzes, notes, admin, subscriptions, TTS, webhooks) + shared services (email, sockets, cron) + Mastra core (agents, workflows, tools, workspace)
- Async architecture – BullMQ for long-running AI jobs; queue events sync DB state and push updates over websockets
- AWS EC2 deployment via GitHub Actions, PM2, Nginx; pnpm, Husky, ESLint, Prettier, Jest, pytest

Trupper | Multi-tenant application for Exams

- Developed a scalable full-stack e-learning platform as Full Stack Developer using Next.js, Node.js, Express.js, MongoDB, AWS, GPT-4, LLaMA, and Groq.
- Designed and deployed multi-tenant architecture enabling organizations to white-label and customize their exam portals.
- Integrated AI-powered question generation (Gemini AI + Groq AI) for automated creation of question banks.
- Built a rich-text editor with Tiptap to support interactive note-taking and exam content authoring.
- Optimized infrastructure by deploying on AWS EC2 and Render with Nginx, improving performance and scalability.

Education

Rivers State University

Bachelor of Science, Marine Engineering
